Numerical Simulations of a Smectic Lamellar  
Phase of Amphiphilic Molecules

Cuvillier Verlag Göttingen

Cuvillier Verlag Dez 2005, 2005. Taschenbuch. Book Condition: Neu. 208x147x12 mm. Neuware - This thesis deals with the liquid crystalline lamellar phase L built by amphiphilic molecules in aqueous solutions, and its interaction with macromolecules. We perform molecular dynamics simulations to study thermal fluctuations and defects appearing in a stack of parallel amphiphilic bilayers separated by layers of solvent. The idealized, coarse-grained model represents the solvent with soft spheres and the amphiphiles with bead-and-spring tetramers (two solvophilic beads and two...
