With acceptable designs for warehouse compartments of this construction, fire frequently can be confined to the section in which it originated. Hence the compartment is still the unit of the warehouse, as it is in case of the fire-resistive construction. The same general influences control its preferred size and proportions except that its limitations must be fixed entirely by walls, the floors not serving to separate compartment units, in case of multiple story construction. 42 BULLETIN 801, U. S. DEPARTMENT OF AGRICULTURE. Slow-burning construction--sometimes called mill construction--consists of substantial masonry walls and heavy timber framing with thick and closely laid floors and roof, all arranged so that no concealed spaces, or pockets, are formed. Although this may be considered a brief definition, there are a number of essential...
