

Energy Sources and Policies in India

By Rishi Muni Dwivedi

New Century Publications, New Delhi, 2011. Hardcover. Book Condition: New. First. 19 cms. 366pp. India is both a major energy producer and consumer. It currently ranks as the 7th largest energy producer in the world, accounting for 2.49 percent of the world's total annual energy production. It is also the 5th largest energy consumer in the world, accounting for 3.45 percent of the world's total annual energy consumption. However, owing to its massive population—estimated presently at 1.2 billion which accounts for 16.4 percent of world population—India's per capita energy consumption is one of the lowest in the world. Since Independence in 1947, the country has seen significant expansion in energy use with a shift from non-commercial to commercial sources. The demand for energy, particularly for commercial energy, has been growing rapidly with the growth of the economy, changes in the demographic structure, rising urbanization, socio-economic development, and the desire for attaining and sustaining self-reliance in vital sectors of the economy. India is short of most energy resources and therefore the present energy scenario is not satisfactory. The power supply position prevailing in the country is characterised by persistent shortages and unreliability and also high prices for industrial consumers. India's oil...
